+ ABOUT ME

I'm Sara, a full stack developer. I enjoy building web apps centered around the MEAN stack. I'm passionate about learning new technologies while working constantly to improve my existing skill set. I'm currently seeking a Junior Developer position in the Baltimore area.

+ PROJECTS

Cultured
Angular 6, Node.js, Express, PostgreSQL, Angular Material

Cultured is an online community where users can share recipes. It implements a single page application design using Angular 6, and is paired with a REST API built with Node.js and Express. User authentication is done via basic auth. Recipe, user, and ingredient data are stored in a PostgreSQL database, and the results are modeled by my own simple ORM.

Let Us Lettuce
Node.js, Express, MongoDB, Bootstrap

Let Us Lettuce lets visitors see what vegetables are in season, and search over 1.5 million recipes using them as ingredients. This is a single page application, but written without the use of a framework. It consumes JSON produce data from a REST API built with Node.js and Express, as well as data from a separate recipe API to dynamically populate the page.

Recipe Box
Node.js, Express, MongoDB, EJS Templates, Bootstrap

Recipe Box is a place for users to create their own repository of recipes. The application is capable of registering, authenticating and authorizing users. It maintains session data with the help of Passport.js. The pages are served by Express, which uses EJS templating. Users can upload and edit their own featured image for each recipe.
